

NET A CAREER in aquaculture

If you like the idea of working outdoors, being your own boss, developing new skills and keeping up with technology, then a job in aquaculture could be for you.

The aquaculture industry is fast paced, innovative and full of opportunities for enthusiastic, hard-working individuals. A qualification in aquaculture can not only put you on the route to running your own business, but is a passport to a career in many countries around the world such as Australia, Canada, Greece, Chile, Norway and many more.

There is a range of challenging and rewarding job roles in this diverse and expanding industry. This includes habitat management, ensuring the health and welfare of stock, and the breeding and rearing of anything from shellfish to finfish, either for sale or for

restocking lakes and rivers for angling. Job roles at management level include planning and supervision, purchasing, sales and marketing.

The qualifications structure is flexible. You can choose how and where you want to learn. Whether you choose an academic qualification at college or university or follow the vocational route into the workplace, you will find a qualification that suits you. This guide illustrates possible career pathways and demonstrates that there is a range of qualifications available to kick start your career in aquaculture.
