

Aerial Tree Rigging

At a glance...

Training (Only)

Duration Notes: 5 days

Prerequisites: Before booking this course you must have done the following:

- Access a tree using a rope and harness
- Aerial tree rescue
- Use of a chainsaw from a rope and harness.

Introduction

Take your Aerial tree work skills to the next level with the Lantra aerial tree rigging course.

Overview in brief

Often when carrying out works on trees free fall techniques are not suitable, this is where aerial rigging comes into play.

This advanced Aerial technique allows the safe and controlled removal of sections of tree, and can be specially useful in the urban environment due to the high likelihood of buildings and other infrastructure being in the drop zone.

This is a hands-on course that delivers both practical skills and health and safety guidance as well as demonstrating that you and your employer have completed sufficient training to meet the **Provision and Use of Work Equipment Regulations 1998 (PUWER)**.

We also use high-quality course materials to accurately reflect current safe working practices.

The finer details

Our course is a balanced mix of theory and practice.

You'll be guided through all the relevant health and safety guidelines to ensure you stay protected on the job.

After a look at pre-work preparation, you'll then move on to the hands-on aspect of the course.

All the appropriate techniques will be taught, from equipment inspection prior to carrying out work to disposal of the waste afterwards.

Worth noting: This is a physically demanding course, so you'll need at least a minimum level of fitness.

Who should attend?

This course is intended for people who are already familiar with aerial tree work and with the use of chainsaws.

Note: Due to the nature of the training a minimum level of fitness is required for specific operations. Whilst we would not want to disadvantage any learner it is an essential requirement.

What will be covered?

By the end of this course you will be able to:

- Understand the legislation and safety guidelines associated with carrying out aerial tree rigging
- Understand when to use aerial tree rigging
- Understand the responsibilities of individuals involved in a rigging operation
- Plan the work site
- Select suitable access methods and work positioning techniques
- Identify component parts of a rigging system
- Carry out equipment inspection and identify defects
- Understand the difference between rigging anchor point above and below load
- Understand how to install a rigging point above and below load
- Select and correctly configure rigging equipment
- Use a variety of rigging attachments
- Understand and carry out a variety of timber removal techniques
- Correctly install and position a pull / tag line
- Understand and calculate peak loads generated in rigging operations
- Store rigging equipment after use
- Understand how to correctly dispose of waste.
