

Canine Remedial Massage and Rehabilitation practitioner Course

At a glance...

Modular customised provision

Duration Notes: 12 to 18 months

The course can be started at any time, with practical days chosen from the your4legs website

Delivery Method: Classroom and practical

Recognised by: Approved by the BCMA (British Complementary Medical Association) Recognised by the IAAT (International Association of Animal Therapies) as acceptable for student / practitioner membership of the IAAT

Prerequisites:

- Students must be over 18 years of age at the start of the course.
- Students under 21 years should have achieved 4 GCSE's at grades A - C., including English Language. (Or provide proof of an equivalent educational standard)
- Students do not need to have experience of massage, but any experience will be a helpful head start.
- Students must be able to demonstrate an understanding and practical experience of handling and

caring for dogs, gained through one or more of the following –

- 3 years' experience of owning and / or working with your own dog or working in a professional canine industry – such as showing, kennels or agility for example.
- Any canine related qualifications or details of short courses you have attended may also be relevant.

Introduction

This course will give you the knowledge, confidence and clinical reasoning skills to become a safe, competent and professional canine remedial massage therapist, with invaluable skills in rehabilitation. It has a flexible start date and range of practical days, so that you can complete your course around a busy lifestyle.

Overview in brief

The course is completed through a mixture of home study and practical days.

Students have 4 home study blocks to complete, where they will learn 10 key canine anatomy and physiology systems, the fundamentals of complementary therapies and the theory of the therapy process – from veterinary approval through to the therapy session and giving aftercare advice. Students will also learn relevant business development skills.

Students will learn over 30 individual therapy techniques encompassing deep tissue massage, joint mobilising techniques, limb stretches, Light Touch Release (LTR) and soft tissue rolling developed specifically for the your4legs courses.

The therapy process, including gait and static assessment, will be practised during 12 intense hands on tutored practical days. The practical days will also include key lectures relating to the therapy process, the musculoskeletal system, common illnesses, conditions and injuries, veterinary diagnosis and an introduction to canine rehabilitation including the use of physiotherapeutic equipment.

The finer details

At your4legs our aim is to enable as many animals as possible to feel the benefits of good therapy work.

In addition to the health benefits of massage, your4legs students will also learn a range of joint mobilising techniques and additional therapy methods developed specifically for the your4legs courses. These include soft tissue rolling and Light Touch Release (LTR), which are related to trigger points and fascia release. Students will also gain a good introduction to canine rehabilitation to help further with the healing process.

The course includes 4 home study theory blocks and 12 intense hands-on practical days.

The course pack includes a comprehensive textbook designed specifically for the course by the your4legs team, together with a workbook which contains questions related to each home study block. The questions need to be completed by the student as part of their home study and marks will count towards their final theory mark.

Students need to complete a range of case studies and a small project on a subject of their choice that is related to canine therapy.

There is a final written exam and a practical assessment. The practical is marked by an external assessor to ensure consistency of quality.

The home study blocks are designed to give students the necessary understanding of 10 key anatomy systems including the musculoskeletal system, the fundamentals of therapy and the theory of the therapy process – from veterinary approval through static and gait assessment to the therapy session and giving relevant aftercare advice. Students will learn key illnesses, injuries and conditions related to both activity and breed type and will gain an introduction to the theory of rehabilitation including some practical techniques and the use of physiotherapeutic equipment. Students will also learn the key aspects of building their own business.

The 12 hands-on practical days include a range of lectures to enhance the learning from the home study blocks with specific lectures related to gait and static assessments, the musculoskeletal and nervous system and a practical introduction to canine rehabilitation.

Who should attend?

- Those who are already qualified as therapists and wish to learn additional therapy skills
- Adults looking for a career change
- Veterinary professionals – vets and vet nurses

Those already working within the canine industry and wishing to broaden their skills and add to their passion – for example behaviourists, trainers, dog groomers and breeders

What will be covered?

At your4legs our key aim is to enable as many animals as possible to feel the benefits of good therapy work. Therefore, the key objectives of this course are to ensure that students gain the necessary theory knowledge and practical skills to become competent and professional canine massage therapists, enabling students to turn their passion into a career.

During the course the following key areas will be covered:
