

Conservation Dog Handler – Stoat (Skills Card)

At a glance...

Assessed Customised Provision

Prerequisites:

Introduction

The course is designed to accredit a novice or experienced handler in the field of conservation detection dog handling (Stoat).

Overview in brief

The course will cover all aspects of handling, maintenance and training , enabling the student to maintain, operate and advise on the capabilities of their Stoat Detection Dog.

Novice handlers will complete the full course, experienced handlers that can demonstrate prior knowledge an dog handling skills, need only attend the module.

The finer details

The course will focus on the latest detection dog training methodologies using science-based techniques including learning theory.

Maintaining the dog at the required level incorporating nutrition, fitness, health and first aid.

The student using a trained detection dog, or their own (this will need to be assessed for suitability) will learn how to operate a detection dog carry out representative tasks looking for Stoats.

Course numbers are limited in order for the student to gain as much practical experience as possible with qualified instructors in the field.

Course assessments are externally assessed to provide credibility to the course and the students taking part.

Who should attend?
