The finer details

Topics covered include:

- Crop Planning and Management
- Tools for Market Gardening
- Bed Preparation
- Irrigation
- Greenhouse Production
- Working With Living Soil
- Nursery and Plant Propagation
- Season Extension
- Harvesting and Conditioning

- The core of the program consists of detailed and in-depth modules covering every stage of production, from seed to sale, for about 30 different crops

Who should attend?

- Committed beginner farmers and market gardeners who need guidance and a community to support their new farm project.
- Established producers who wish to increase their production efficiency and crop yields.
- Conventional farmers transitioning to smaller or organic operations who wish to learn more about bio-intensive vegetable production.
- Serious gardeners who want to improve their efficiency and grow on a larger scale.

What will be covered?

The Masterclass combines in-depth video tutorials, details on day-to-day operations, a vibrant digital community, and a comprehensive digital library outlining methods, techniques and tools. This program allows you to master the methodology, tools, and techniques to grow crops successfully in a context of heightened efficiency in the regenerative micro farming model.

By the end of the program, participants will be able to:

- Develop Structured Crop Planning: Implement business-like crop planning to enhance productivity.
- Grow High-Quality Vegetables Year-Round: Cultivate healthy crops efficiently across all four seasons by following detailed itineraries.
- Extend Growing Seasons: Apply season extension and tunnel management techniques to produce organic vegetables during shoulder and off-seasons.
- Increase Off-Season Income: Understand principles and practices to boost farm income during low seasons.
- Enhance Greenhouse Production: Utilize methodologies to elevate greenhouse vegetable production.
